

AISI 316L Stainless Steel Maintenance

Stainless steel also needs periodic maintenance. Brown spots can occur on stainless steel parts that are in contact with salt water. If brown spots occur, it's important to wash and clean the surface to maintain the finish of high polished stainless steel. Follow the directions below to maintain your equipment for years of enjoyable performance.

Use Stainless Steel polish, wipes or similar polish/cleaners. Follow manufacturer's directions for application and removal. For prolonged polished appearance, rinse the equipment after each use with your fresh water wash down. Wipe with a clean dry cloth.

Cleaning and polishing the stainless steel regularly will keep the brilliance of your equipment's finish looking its best!
